

The proven TRAM Fall Protection System, with thousands of units installed worldwide, is now available for Lattice Boom Crawler cranes. The TRAM system provides fall restraint or arrest protection as well as an integrated, adjustable handhold for both stability and confidence.

Safety

- **Protects** both operators and mechanics during rigging or maintenance anywhere along the top or inside of a lattice section.
- **Secures** user during dangerous access/egress at ladder-to-platform transition.
- **Handhold at height** provides a feeling of safety and stability.
- **Eliminates requirement** for second worker onsite when used as a fall restraint device.

Performance

- **Exceeds fall protection standards worldwide.**
- **Flexible access** - system can be installed continuously along all lattice sections, with removable jumpers between sections, or on specific sections requiring regular attention.
- **All weather durability** allows for installation and usage in climates around the world.

Installation

- **Innovative clamping mounts** allow the system to be installed without welding to the lattice section.
- **Installation assistance available** - Standfast can install your system or can train your personnel to install.
