

The proven TRAM Fall Protection System with thousands of units installed worldwide is now available for Single Dome Tankers. The TRAM system provides fall restraint or arrested protection as well as an integrated & adjustable handhold for both stability and confidence.

Safety

- **Protects** both operators and mechanics during rigging or maintenance activities whose locations are accessed from counterweight or other elevated location
- **Secures** user during dangerous access & egress at the ladder-to-platform transition Hook in at 4 feet
- **Handhold at height** provides a feeling of safety and stability
- **Eliminates requirement** for second worker onsite when used as a fall restraint device

Performance

- **Exceeds fall protection standards worldwide.**
- **Flexible solution-** the TRAM system has many different variants that allow it to be configured to meet your specific needs
- **All weather durability** allows for installation and usage in climates around the world

Installation

- **Flexible Installation Methods-** TRAM systems can be installed using bolted, welded, or bonded mounts
- **Installation Assistance Available** Standfast USA can install your system or can train your personnel to install

Certification and Testing

The TRAM range of products has been tested to and conforms with the relevant fall restraint and fall arrest testing requirements of:

- ANSI/ASSE Z359.57
- EN795
- AS/NZS 7897.57
